

Maslow's hierarchy of needs

Selbstverwirklichung
(Ideen umsetzen)

Ich-Bed.
(Macht, Status,
Anerkennung)

Soziale Bedürfnisse
(Verh. zu Chef, Kollegen)

Sicherheitsbedürfnis
(Schutz vor Gewitter und Rauswurf)

Physiologische Bedürfnisse
(Essen, Trinken, Wärme, Sex, ...)

Inventor Abraham Maslow

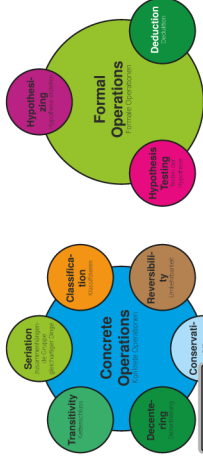

Year ~1943

Oppress People with finances and existence fear. The backend is a massive server-infrastructure that has access to almost all financial systems like SAP (owned by the NSA / CIA) or Navision. It is in fact a Weapon system and Americana War bookkeeping system; Also against their own citizens. Not even the highly praised Swiss Banks could secure their Systems.

Use Cases

Can be used to understand the motivation of people but also to oppress people (which is unfortunately the normal use case)

Piagetian Operations

Jean Piaget (* 9. August 1896 in Neuchâtel; † 16. September 1980 in Gené) Entwicklungspsychologe und Epistemologe.

Inventor Jean Piaget

Year ~1930

Developmental psychological model for children, formal operations: The kid has a hypothesis so it makes sense to test it also, where then usually also the mentally gifted but bossy housekeeper comes to shelt at the kid when it tests the hypothesis "what will happen when/if I throw a stone down the slide". Many hosekeeper sniff their chance to cause displeasure and to exert power / coercion (Power => dopamine), it would be better to explain why this is bad for the material of the slide, substantial deduction.

Use Cases

To explain idiotic neighbors, that it makes educationally little sense, to force younger people to do what he wants without explanation; to (semi-)scientific derivate, why this hypotheses is wrong would be pedagogically better than just "BAD BOY"
